

Report for ForestQuery into Global Deforestation, 1990 to 2016

ForestQuery is on a mission to combat deforestation around the world and to raise awareness about this topic and its impact on the environment. The data analysis team at ForestQuery has obtained data from the World Bank that includes forest area and total land area by country and year from 1990 to 2016, as well as a table of countries and the regions to which they belong.

The data analysis team has used SQL to bring these tables together and to query them in an effort to find areas of concern as well as areas that present an opportunity to learn from successes.

1. GLOBAL SITUATION

According to the World Bank, the total forest area of the world was 41282694.90 in 1990. As of 2016, the most recent year for which data was available, that number had fallen to 39958245.90, a loss of 1324449.00, or -3.21 %.

The forest area lost over this time period is slightly more than the entire land area of peru listed for the year 2016 (which is 1279999.99).

2. REGIONAL OUTLOOK

In 2016, the percent of the total land area of the world designated as forest was 31.38. The region with the highest relative forestation was Latin America & Caribbean, with 46.16 %, and the region with the lowest relative forestation was Middle East & North Africa, with 2.07 % forestation.

In 1990, the percent of the total land area of the world designated as forest was 32.42. The region with the highest relative forestation was Latin America & Caribbean, with 51.03 %, and the region with the lowest relative forestation was Middle East & North Africa, with 1.78 % forestation.

Table 2.1: Percent Forest Area by Region, 1990 & 2016:

Region	1990 Forest Percentage	2016 Forest Percentage
Latin America & Caribbean	51.03	46.16
Europe & Central Asia	37.28	38.04
North America	35.65	36.04
World	32.42	31.38
Sub-Saharan Africa	30.67	28.79
East Asia & Pacific	25.78	26.36
South Asia	16.51	17.51
Middle East & North Africa	1.78	2.07

The only regions of the world that decreased in percent forest area from 1990 to 2016 were latin america & caribbean (dropped from 51.03 % to 46.16 %) and Sub-Saharan Africa (30.67 % to 28.79 %). All other regions actually increased in forest area over this time period. However, the drop in forest area in the two aforementioned regions was so large, the percent forest area of the world decreased over this time period from 32.42% to 31.38 %.

3. COUNTRY-LEVEL DETAIL

A. SUCCESS STORIES

There is one particularly bright spot in the data at the country level, china. This country actually increased in forest area from 1990 to 2016 by 527229.06 sqkm. It would be interesting to study what has changed in this country over this time to drive this figure in the data higher. The country with the next largest increase in forest area from 1990 to 2016 was the united states, but it only saw an increase of 79200.00sqkm, much lower than the figure for china.

_____ china _____ and _____ Russian Federation _____ are of course very large countries in total land area, so when we look at the largest *percent* change in forest area from 1990 to 2016, we aren't surprised to find a much smaller country listed at the top. 55390.00 sqkm _____ increased in forest area by _____ 19.29 _____ % from 1990 to 2016.

B. LARGEST CONCERNS

Which countries are seeing deforestation to the largest degree? We can answer this question in two ways. First, we can look at the absolute square kilometer decrease in forest area from 1990 to 2016. The following 3 countries had the largest decrease in forest area over the time period under consideration:

Table 3.1: Top 5 Amount Decrease in Forest Area by Country, 1990 & 2016:

Country	Region	Absolute Forest Area Change
Brazil	Latin America & Caribbean	541510.00
Indonesia	East Asia & Pacific	282193.98
Myanmar	East Asia & Pacific	107234.00
Nigeria	Sub-Saharan Africa	106506.00
Tanzania	Sub-Saharan Africa	102320.00

The second way to consider which countries are of concern is to analyze the data by percent decrease.

Table 3.2: Top 5 Percent Decrease in Forest Area by Country, 1990 & 2016:

Country	Region	Pct Forest Area Change
Togo	Sub-Saharan Africa	0.75
Nigeria	Sub-Saharan Africa	0.62
Uganda	Sub-Saharan Africa	0.59
Mauritania	Sub-Saharan Africa	0.47
Honduras	Latin America & Caribbean	0.45

When we consider countries that decreased in forest area percentage the most between 1990 and 2016, we find that four of the top 5 countries on the list are in the region of __Sub-Saharan Africa_____. The countries are _Togo_____, __. People's _____Nigeria_____, __Uganda_____, and __Mauritania_____. The 5th country on the list is _____Honduras_____, which is in the _Latin America & Caribbean_____ region.

From the above analysis, we see that __Nigeria_____ is the only country that ranks in the top 5 both in terms of absolute square kilometer decrease in forest as well as percent decrease in forest area from 1990 to 2016. Therefore, this country has a significant opportunity ahead to stop the decline and hopefully spearhead remedial efforts.

C. QUARTILES

Table 3.3: Count of Countries Grouped by Forestation Percent Quartiles, 2016:

Quartile	Number of Countries
0-25%	85
25%-50%	72
50%-75%	38
75%-100%	9

The largest number of countries in 2016 were found in the _____first_____ quartile.

There were _____9_____ countries in the top quartile in 2016. These are countries with a very high percentage of their land area designated as forest. The following is a list of countries and their respective forest land, denoted as a percentage.

Table 3.4: Top Quartile Countries, 2016:

Country	Region	Pct Designated as Forest
---------	--------	--------------------------

American Samoa	East Asia & Pacific	87.50
Gabon	Sub-Saharan Africa	90.04
Guyana	Latin America & Caribbean	83.90
Lao PDR	East Asia & Pacific	82.11
Micronesia, Fed. Sts.	East Asia & Pacific	91.86
Palau	East Asia & Pacific	87.61
Seychelles	Sub-Saharan Africa	88.41
Solomon Islands	East Asia & Pacific	77.86
Suriname	Latin America & Caribbean	98.26

4. RECOMMENDATIONS

Write out a set of recommendations as an analyst on the ForestQuery team.

- *What have you learned from the World Bank data?*

Base on world bank database I run some different kind of scenarios first i check the each country by the total area of and how much they forest area. I check the 1990 to 2016 during that time period the different country have different change over time. Some country they grow up that forest area that really good. Some region like Latin America & Caribbean, Europe & Central Asia, North America this all region area the top 3 region that forest area grow really well during 1990 to 2016 and South Asia, East Asia & Pacific this region are very low grow rate for forestation. and Middle East & North Africa is really low 2.07.

Base on this analysis we need more focus Middle East & North Africa, East Asia & Pacific region we need provided guideline like to how they more focus on the forest area.

We need to explain them the Important of forest in country and how they control the global warming other factors like pure air and they pure the air.

We need to do awareness camp in this country and make people need to aware for that.

- *Which countries should we focus on over others?*

We need focus on China, United States, India, Russian Federation because in this country forest area grow very less compare to the other country. They provide land other business.

5. APPENDIX: SQL Queries Used

CREATE VIEW

```
DROP VIEW IF EXISTS forestation;
CREATE VIEW forestation AS
(
SELECT f.country_code,
       f.year,
       f.forest_area_sqkm,
       l.total_area_sq_mi,
       r.country_name,
       r.region,
       r.income_group,
       f.forest_area_sqkm / (l.total_area_sq_mi * 2.59) * 100 AS forest_sqkm_percent
FROM forest_area f
JOIN land_area l
ON f.country_code = l.country_code AND f.year = l.year
JOIN regions r
ON f.country_code = r.country_code);
```

Part- 1 >

Question 1 What was the total forest area (in sq km) of the world in 1990? Please keep in mind that you can use the country record denoted as “World” in the region table.

```
SELECT ROUND(SUM(forest_area_sqkm)::numeric,2) AS forest_area_1990
FROM forestation
WHERE year = 1990 AND country_name = 'World';
```

QUESTION > 2

What was the total forest area (in sq km) of the world in 2016? Please keep in mind that you can use the country record in the table is denoted as “World.”

```
SELECT ROUND(SUM(forest_area_sqkm)::numeric,2) AS forest_area_2016
FROM forestation
WHERE year = 2016 AND country_name = 'World';
```

QUE. 3 >

What was the change (in sq km) in the forest area of the world from 1990 to 2016?

```
WITH forest_1990 AS (  
    SELECT ROUND(SUM(forest_area_sqkm)::numeric,2) AS forest_area_1990  
    FROM forestation  
    WHERE year = 1990 AND Country_name = 'World'),
